Introduction

South Carolina Social Studies Academic Standards contains the revised academic standards in social studies for South Carolina students from kindergarten through grade 12. A field review of the first draft of these standards was conducted from September 2010 through January 2011, and feedback from that review has been incorporated into this document. Because a working knowledge of government, geography, economics, and history is essential for informed, participatory citizenship in a democracy, the theme for these standards is civic education. The final draft was presented to the State Board of Education on May 12, 2011.

The South Carolina Department of Education (SCDE) developed these standards and the indicators utilizing the following sources:

Academic Standards

In accordance with the South Carolina Educational Accountability Act of 1998, the purpose of academic standards is to provide the basis for the development of local curricula and statewide assessment. Consensually developed academic standards describe for each grade and high school core area the specific areas of student learning that are considered the most important for proficiency in the discipline at the particular level.

The academic standards in this document are not sequenced for instruction and do not prescribe classroom activities, materials, or instructional strategies, approaches, or practices. *South Carolina Social Studies Academic Standards* is not a curriculum.

Statewide Assessment

The social studies standards in grades 3 through 8 will be the basis for development of the social studies test questions for the Palmetto Assessment of State Standards (PASS). Likewise, the social studies standards for United States History and the Constitution (USHC) will be used to develop assessments for the End-of-Course Evaluation Program (EOCEP).

The EOCEP and PASS will be based on the standards and indicators at each grade level and will sample from the indicators. While the EOCEP and PASS will measure the content of the standard, the questions will not exceed the scope and intent of the indicators associated with that standard.

Definitions of Key Terms

- **Academic standards.** Statements of the most important, consensually determined expectations for student learning in a particular discipline. In South Carolina, standards are provided for each grade from kindergarten through grade 8, high school required courses, and selected electives.
- **Enduring Understanding.** Enunciated by Grant Wiggins and Jay McTighe in their 2005 volume *Understanding by Design*, enduring understandings are “The specific inferences that have lasting value beyond the classroom”:

Enduring understandings are central to a discipline and are transferrable to new situations. For example, in learning about the rule of law, students come to understand that “written laws specify the limits of a government’s power and articulate the rights of individuals, such as due process.” This inference from facts, based on big ideas such as “rights” and “due process,” provides a conceptual unifying lens through which to recognize the significance of the Magna Carta as well as to examine emerging democracies in the developing world.

Because such understandings are generally abstract in nature and often not obvious, they require **uncoverage** through sustained inquiry rather than one-shot **coverage**. The student must come to understand or be helped to grasp the idea, as a result of work. If teachers treat an understanding like a fact, the student is unlikely to get it. (p. 342)

- **Indicators.** Specific statements of the content (knowledge and skills) and cognitive processes that the student must demonstrate in order for him or her to meet the particular grade-level or high school core-area academic standard. Indicators provide essential guidance for ongoing assessment.

The verbs in the indicators identify specific aspects of a cognitive process as described in the taxonomy shown in appendix C. Use of the revised Bloom’s taxonomy will allow teachers to identify the kind of content (knowledge) addressed in the indicators (as factual, conceptual, procedural, or metacognitive) and will help teachers align lessons with both the content and the cognitive processes identified in the indicators. The majority of the indicators in social

studies address conceptual knowledge and are categorized as *understanding*, which fosters transfer and meaningful learning rather than rote learning and memorization.

- **Social Studies Literacy Skills for the Twenty-First Century.** Found in appendix A, these social studies literacy skills are the tools, strategies, and perspectives that are necessary for the student’s understanding the social studies content to be taught at each grade level. These skills begin at the kindergarten level and progress to graduation with developmentally appropriate iterations of the same skill being further honed at each grade band. While the majority of these skills can be utilized in the teaching of each standard, the most *appropriate* skills for the standard have been selected from the chart and are repeated in a bulleted list that appears in a framed box in the lower half of each standard’s page.
- **Glossary.** Important yet less well-known terms appear in boldface type throughout the standards and the indicators and are defined in the glossary.

Revised Organization and Content of the Social Studies Standards Document

The organization of the South Carolina social studies standards document has been modified from the 2005 document in the following ways:

- A. An “Enduring Understanding” statement has been added for each standard. This statement identifies and briefly explains the main idea or central concept inherent in the standard that students should understand and be able to transfer to new learning and situations.
- B. A chart titled “Social Studies Literacy Skills for the Twenty-First Century”—a continuum enunciating the skills, tools, and strategies required for students to understand the overarching perspectives and principles that are essential for literacy in the various disciplines of social studies—has been added in appendix A. The continuum is divided into four levels: kindergarten through grade 3, grades 4 through 5, grades 6 through 8, and high school.

While the majority of these skills can be utilized in the teaching of every standard, the most *appropriate* skills for each particular standard have been selected from the chart and are listed at the bottom of the individual standard page, following the *indicator* statements.

- C. Standards are provided for nine grade levels (kindergarten through grade 8) and three *required* high school courses: United States History and the Constitution, Economics, and United States Government. Standards, which may be used as guidelines, have also been included for two *elective* courses, World History from 1300: The Making of the Modern World and World Geography.

Social Studies Curriculum Support Document

The SCDE will develop a revised curriculum support document after these social studies standards have been adopted by the State Board of Education. Local districts, schools, and teachers can use that document to construct a standards-based curriculum, adding or expanding topics they feel are important and organizing the content to fit their students’ needs and materials.

GRADE 1

Foundations of Social Studies: Families

Standard 1-1: The student will demonstrate an understanding of how families interact with their environment both locally and globally.

Enduring Understanding

People interact not only with each other and but also with the environment. To demonstrate an understanding of the connections between people and the environment, the student will utilize the knowledge and skills set forth in the following indicators:

Indicators

- 1-1.1 Identify a familiar area of the neighborhood or local community on a simple map, using the legend and basic map symbols.
- 1-1.2 Compare schools and neighborhoods that are located in different settings around the world.
- 1-1.3 Identify various natural resources (e.g., water, animals, plants, minerals) around the world.
- 1-1.4 Compare the ways that people use land and natural resources in different settings around the world.

This is the **descriptive theme** for all of the academic standards for **grade 1**.

This is the first **academic standard** for grade 1—the central expectation for student learning in this particular context.

This is the “**enduring understanding**” that frames the goal of the first academic standard for grade 1—the overriding concept for the student to comprehend, remember, and transfer to new situations in life.

These are the four **indicators** for the first academic standard for grade 1—statements delineating the knowledge and skills that the student must acquire and demonstrate.

Social Studies Literacy Skills for the Twenty-First Century

- Recognize maps, **mental maps**, and geographic models as representations of spatial relationships.
- Find and describe the locations and conditions of places.
- Interpret information from a variety of social studies resources.*

* Social studies resources include the following: texts, calendars, timelines, maps, mental maps, charts, tables, graphs, flow charts, diagrams, photographs, illustrations, paintings, cartoons, architectural drawings, documents, letters, censuses, artifacts, models, geographic models, aerial photographs, satellite-produced images, and geographic information systems.

These are the three **social studies skills for the twenty-first century** that are most appropriate for the first academic standard at this grade level—the tools, strategies, and perspectives that are necessary for the student’s understanding the social studies content to be taught at this grade level.

Grade-Level Standards for Social Studies

GRADES K–3

KINDERGARTEN

Foundations of Social Studies: Children as Citizens

Social studies in kindergarten focuses on those aspects of living that affect the children and their families. The classroom serves as a model of society in which decisions are made with a sense of individual responsibility and with respect for the rules by which we all must live. The students learn about the nature of their physical environment—home, school, neighborhood, and town, including how the people in their community provide goods and services. They also learn about the role of families now and in the past; the need for rules and authority; and the values of American **democracy** as reflected in the traditions and history of the nation.

Instruction should utilize the social studies literacy skills for the twenty-first century that are enunciated in chart format in appendix A. These statements represent a continuum of tools, strategies, and perspectives that are necessary for the student’s understanding of social studies material that is taught at each grade level. Beginning at kindergarten and progressing to graduation, each statement is a developmentally appropriate iteration of the same skill as it is being further honed at each grade band (K–3, 4–5, 7–8, and high school). While most of these skills can be utilized in the teaching of every standard, the most *appropriate* skills for each standard are repeated in a bulleted list at the bottom of the page for that particular standard.

To access and utilize geographic information efficiently, effectively, and accurately, the student will utilize the knowledge and skills set forth in the following indicators:

Indicators

GRADE 8

South Carolina: One of the United States

The focus for social studies in grade eight is the history of South Carolina and the role that the state and its people have played in the development of the United States as a nation. Students learn about the state's development during colonial times; the growth of the American ideal, which led to the break with England; and the rising controversy about slavery, which led to the Civil War. The continued study of South Carolina from Reconstruction to the present, including the struggle for social and economic justice waged by the people of South Carolina, further allows students to see the progress that the state has made and also to visualize the future challenges yet to be met and overcome.

High School Standards for Social Studies

WORLD GEOGRAPHY

(Elective)

The focus of World Geography is the physical and cultural characteristics of Earth. The course is organized systematically around the topics of region, physical earth dynamics, population, **culture**, economic systems, urban systems, political systems, and the environment. The course standards are not meant to be taught in order or in isolation. Critical thinking should be emphasized in this course, with stress placed on the development of spatial thinking skills and competency related to the five themes of geography: location, place, regions, movement, and human-environment interaction. Conceptual in nature rather than place-specific, the course may be taught from either a systematic or a regional perspective. For this reason, an example is included in each indicator, giving the teacher insight into the intent of the indicator. Map-reading skills and the use of geographic models and geographic information systems should be an integral part of this course.

Instruction should utilize the social studies literacy skills for the twenty-first century that are enunciated in chart format in appendix A. These statements represent a continuum of tools, strategies, and perspectives that are necessary for the student's understanding of social studies material that is taught at each grade level. Beginning at kindergarten and progressing to graduation, each statement is a developmentally appropriate iteration of the same skill as it is being further honed at each grade band (K-3, 4-5, 7-8, and high school). While most of these skills can be utilized in the teaching of every standard, the most *appropriate* skills for each standard are repeated in a bulleted list at the bottom of the page for that particular standard.

ECONOMICS

(Required)

Economics is a social science. The science of economics uses data to analyze, interpret, and predict the behavior of individuals and institutions based upon incentives. The goal of a study of economics is to teach a student how to evaluate choices. Scarcity forces all entities—individuals, communities, and nations—to choose from available resources to meet their needs. Students will learn to use vocabulary specific to economics to explain, describe, and predict how the interaction of **supply** and **demand** sets prices for goods and services in product markets and wage prices in factor markets. Intervention in free markets decreases efficiency but is sometimes necessary in order to safeguard individuals and societies from undue exploitation. Markets allocate goods, services, and labor and government regulates markets and purchases goods and services for the common good. Current choices impact future outcomes that are theoretically predictable.

The choices that societies make affect the well-being of all citizens. The consequences of these choices are evaluated through the numerical measurements of the gross domestic product (GDP) and the consumer price index (CPI) as well as through the use of other quantitative measurements. A relationship between investment and growth exists, and increased investment leads to more rapid growth that may be uneven and erratic. The role and abilities of the Federal Reserve in managing these economic cycles is evolutionary, with real-life results whose predictability is affected by volatile circumstances. Increased **globalization** has altered trade patterns and greatly expanded markets, as has technological change.

Citizens as consumers and producers are the fundamental actors in our mixed-market economic system. The choices made by government, institutions, and individuals have predictable outcomes, and the well-being of all groups is impacted by these choices.

Instruction should utilize the social studies literacy skills for the twenty-first century that are enunciated in chart format in appendix A. These statements represent a continuum of tools, strategies, and perspectives that are necessary for the student's understanding of social studies material that is taught at each grade level. Beginning at kindergarten and progressing to graduation, each statement is a developmentally appropriate iteration of the same skill as it is being further honed at each grade band (K–3, 4–5, 7–8, and high school). While most of these skills can be utilized in the teaching of every standard, the most *appropriate* skills for each standard are repeated in a bulleted list at the bottom of the page for that particular standard.

Revised Bloom's Taxonomy

In 1956, Benjamin Bloom and his colleagues published the *Taxonomy of Educational Objectives: The Classification of Educational Goals*, a groundbreaking book that classified educational goals according to the cognitive processes that learners must use in order to attain those goals. In order to reflect the new data and insights about teaching and learning that the past forty-five years of research have yielded—and to refocus educators' attention on the value of the original Bloom's taxonomy—Lorin Anderson and David Krathwohl led a team of colleagues in revising and enhancing that system to make it more usable for aligning standards, instruction, and assessment in today's schools. Their results of their work were published in 2001 as *A Taxonomy for Learning, Teaching, and Assessing: A Revision of Bloom's Taxonomy of Educational Objectives* (New York: Allyn and Bacon).

The revised taxonomy is two-dimensional, identifying both the kind of knowledge to be learned (knowledge dimension) and the kind of learning expected from students (cognitive processes) to help teachers and administrators improve alignment and rigor in the classroom. This taxonomy will assist educators in improving instruction and ensuring that their lessons and assessments are aligned with one another and with the state standards.

Social studies goes well beyond simple recognition and recall and the memorization of facts that many people mistake for the core of history. The verbs in the indicators of the 2011 social studies academic standards are subcategories of the six cognitive processes described in the revised Bloom's taxonomy. The verbs are intentionally selected to be appropriate when teaching the particular content in each indicator. For example, one might *compare* two civilizations or *summarize* the achievements of one civilization. Both of these are included in the cognitive process dimension *understand*, which has five other processes: *interpreting*, *exemplifying*, *classifying*, *inferring*, and *explaining*. All seven subcategories are important aspects of *understanding* and should be part of the learning process for that indicator when they are appropriate for the content. In addition, cognitive process categories lower on the taxonomy may need to be addressed in order to reach the next level. For example, students need to *recognize* and *recall* some details about each of two civilizations in order to *compare* them. State assessments such as the EOCEP and PASS might address any of the subcategories in a particular cognitive category or categories lower on the taxonomy as appropriate to the content. Beginning with these revised social studies standards, descriptions of the kinds of learning required in South Carolina standards will be drawn directly from the revised Bloom's taxonomy.

Tables 1 and 2 below are reproduced from Anderson and Krathwohl's *Taxonomy for Learning, Teaching, and Assessing*, pages 46 and 67, respectively. Table 3, "A Taxonomy for Teaching, Learning, and Assessing," describes both dimensions of the taxonomy: the categories and subcategories of knowledge described in table 1 and the cognitive processes described in table 2. This matrix is provided as a template for teachers to use in analyzing their instruction as they seek to align standards, units/lessons/activities, and assessments. Examples and more information about specific uses of the matrix can be found in the *Taxonomy for Learning*.
